CORPORATE PRESENTATION
NOVEMBER 2026

TSXV: **CGNT** OTCQX: **CGNRF** FRA: **29H0**

FORWARD LOOKING STATEMENT

Certain statements included in this presentation are forward-looking statements within the meaning of Canadian securities laws, including the following statements: the ability of Copper Giant (or the “Company”) to develop resources and then further develop reserves and resources; the anticipated economic potential of the concessions; the availability of capital and finance for the Company to execute its commitments and strategy going forward. Forward-looking statements are based on estimates and assumptions made by the Company in light of its experience and perception of current conditions and expected future developments, as well as other factors that the Company believes are appropriate in the circumstances. Many factors could cause the Company’s results, performance or achievements to differ materially from those expressed or implied by the forward looking statements, including: discrepancies between actual and estimated results from exploration and development and operating risks, dependence on early exploration stage concessions; political and foreign risks; uninsurable risks; competition; regulatory restrictions, including environmental regulatory restrictions and liability; currency fluctuations; defective title to mineral claims or property and dependence on key employees. Persons reviewing this presentation are cautioned not to place undue reliance on forward-looking statements due to inherent uncertainty therein. The Company disclaims any intention or obligation to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise, except as required by law.

The scientific and technical information regarding the MineralResource Estimate ("MRE") in this presentation is based on theupdated MRE announced on October 14, 2026, prepared by APEXGeoscience Ltd. ("APEX") under National Instrument 43-101 ("NI43-101") by Warren Black (M.Sc., P.Geo.), an independentQualified Person, with an effective date of September 24, 2026.A supporting NI 43-101 Technical Report will be filed on SEDAR+ (www.sedarplus.ca) and on the Company’s website (www.coppergiant.com) within 45 days of the October 14, 2026news release. The scientific and technical informationcontained in this presentation has been reviewed and approvedby Edwin Naranjo Sierra, Vice-President of Exploration (MSc andFAusIMM), who is a “Qualified Person” as defined under NationalInstrument 43-101. Mr. Naranjo is not independent of the Company. A technical report prepared in accordance with NI 43-101 supporting the MRE will be filed on SEDAR+ at www.sedarplus.ca and on the company's website within 45 days of the NR date.

/ MOCOA COPPER GIANT®

290
MILLION TONNES INDICATED @ 0.54% CuEq*

1.6 BILLION TONNES INFERRED
@ 0.40% CuEq* Grade

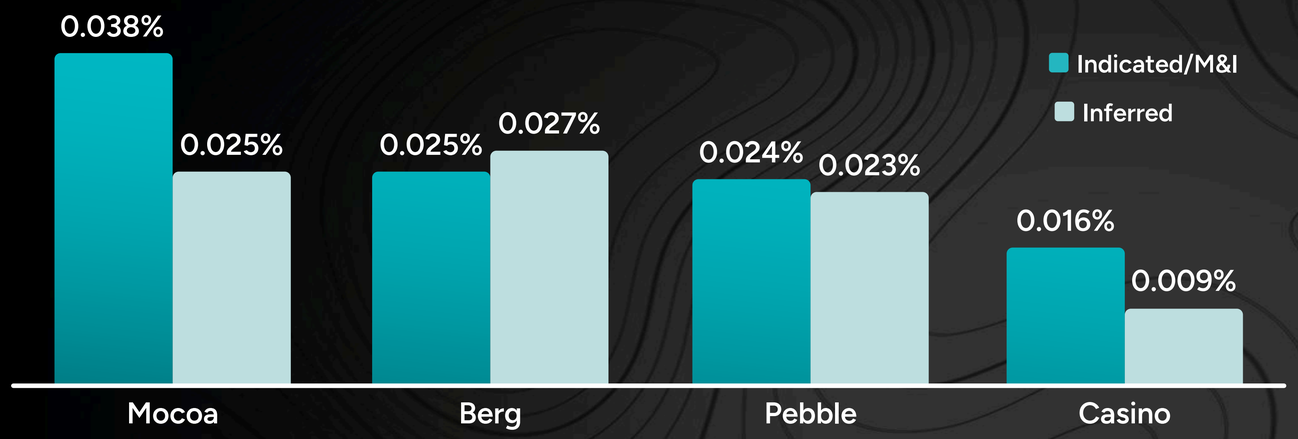

Copper equivalent (CuEq) for the 2026 MRE is calculated as:CuEq (%) = Cu (%) + 5.383 × Mo (%), utilizing metal prices ofCu - US$4.75/lb and Mo - US$25.00/lb and metallurgicalrecoveries of 88% Cu and 90% Mo. *For further information aboutMRE, refer to slide 27.

TSXV: **CGNT** OTCQX: **CGNRF** FRA: **29H0**

MOLYBDENUM

MOCOA ONE OF THE WORLD'S RICHEST MOLYBDENUM-COPPER PORPHYRIES.

/ MOCOA COPPER GIANT®

MOCOA'S RECOVERY BASIS **90%**

Mo recovery used in the updated MRE_2

WHY INDUSTRY NEEDS IT

Stronger steel. Greater resistance to heat and corrosion.

The U.S. holds no stockpile and the NDAA **has added molybdenum to the defense covered-materials list**, joining rare-earth magnets, tantalum and tungsten. Colombia is a Major Non-NATO Ally.

China restricts exports, ~40% of world supply now behind export licenses.

Irreplaceable, no substitute in superalloys or high-temperature steels.

Porphyry copper and molybdenum deposit supply ~95% of the world moly [1]

In the ranking of best reputation among mining companies in colombia.

TSXV: **CGNT** OTCQX: **CGNRF** FRA: **29H0**

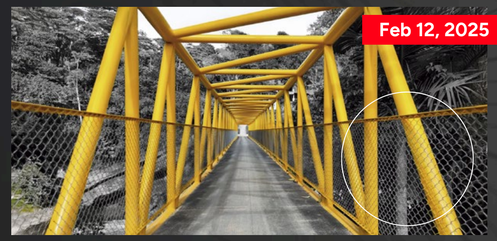

POLITICAL WILL

COPPER GIANT®

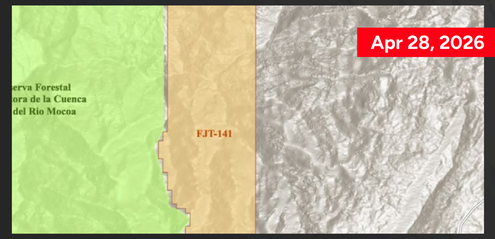

Under **PETRO administration**

"Copper giant announces update to colombia's cadastral records enhancing Mocoa project potential" .

"Copper giant completes montclar bridge, supporting expanded exploration at mocoa porphyry Copper-molybdenum project, colombia".

"Unified concession secured long term development at Mocoa".

WHAT THIS GOVERNMENT HAS DONE FOR MOCOA

"Mining is a cornerstone of Colombia's energy future, job creation, and fiscal stability."

Abelardo de la Espriella
Presidente of Colombia 2026 - 2030

"Formal mining requires clear rules and efficiency; that is why we are pushing for more streamlined environmental permits, a genuine plan to remove regulatory barriers, legal certainty in prior consultations, and strong support for formalization."

Juan Manuel Restrepo
Vice President of Colombia

"We need to move beyond restrictive narratives to enable sustainable co-design projects."

Fabio Alberto Arjona Hincapié
Ministry of Environment and Sustainable Development

"Putumayo's copper reserves are truly enviable; they are perhaps among the most significant copper reserves in the world."

Luis Francisco Madriñán
Deputy Minister of Mines of Colombia

THE 4 ACTIONS THAT MAKE THE DIFFERENCE

1. Oct 22 — COMPLETED

ANM president visits Libero Cobre and the Mocoa Project
The national mining authority on the ground, according to its own publication.

2. Oct 23 — ANNOUNCED

ANM service point in Mocoa, chosen over Puerto Asís.
Permanent presence of the mining authority in Mocoa. Not yet operating.

3. Oct 23 — ISSUED

Res. 1405 revokes the Amazon biome reserve that covered Putumayo. Areas can be applied for again. Nullity lawsuit filed Oct 28; other protections remain.

4. Oct 20 — PROPOSED

Draft list: molybdenum, a strategic mineral on its own, alongside copper. Mocoa's two metals would be strategic. Comments until Nov 11.

OTHER KEY FACTS

- The President orders the ANM and MinAmbiente to take on Mocoa's PBOT. The only presidential act on record specific to Mocoa.
- ANM sends CGNT its proposals to Congress: technical information and resource certification instead of approving the PTO. Would eliminate the approval step after the PEA.
- ANLA director meets with CGNT: technical working groups, goal of one year down to six months. The regulator working directly on Mocoa's license.
- AEM 39 Chaparral awarded to Libero Cobre; contract signed Oct 9
  The State chose our company and signed with it. Tolima, not Mocoa.
- United States–Colombia critical minerals framework (MOU).
  Window until around March 2027 to nominate projects. Nothing assigned to Mocoa yet.

- The MRE was completed by Warren Black, M.Sc., P.Geo., Senior Consultant: Mineral Resources and Geostatistics ofAPEX. Mr. Black is an independent Qualified Person, as defined by NI 43-101, and is responsible for the completion ofthe Mineral Resource Estimate, with an effective date of September 24, 2026.
- Mineral Resources that are not Mineral Reserves do not have demonstrated economic viability.
- The estimate of Mineral Resources may be materially affected by environmental, permitting, legal, title, taxation, socio-political, marketing, or other relevant issues.
- The Inferred Mineral Resource in this estimate has a lower level of confidence than that applied to an Indicated Mineral Resource and must not be converted to a Mineral Reserve. It is reasonably expected that the majority of the Inferred Mineral Resource could potentially be upgraded to an Indicated Mineral Resource with continued exploration.
- The Mineral Resources were estimated in accordance with the Canadian Institute of Mining, Metallurgy and Petroleum (CIM), CIM Standards on Mineral Resources and Reserves, Definitions (2014) and Best Practices Guidelines (2019) prepared by the CIM Standing Committee on Reserve Definitions and adopted by the CIM Council.
- Economic assumptions used include US$4.75/lb Cu, US$25.00/lb Mo, process recoveries of 88% for Cu and 90% for Mo, a US$7/t processing cost, G&A costs of US$1.50/t, and a 3% NSR royalty.
- The constraining pit optimization parameters include a US$2.8/t mining cost for both mineralized and waste materialand 50° slopes. Mineral Resources within the conceptual pit shell are reported at a cut-off of 0.15% CuEq*.
- The Underground Mineral Resources include blocks below the constraining pit shell that satisfy the geometric andcutoff criteria of a conceptual block-caving mining scenario. A mining cost of US$25/t, together with the economicassumptions above, supports a cut-off of 0.4% CuEq*. The resource constraint applies a minimum mining unit of 60 m by60 m by 90 m. Reported tonnage includes below-cutoff “must take” material contained within the potentially mineableshapes
- CuEq* values are calculated as CuEq (%) = Cu (%) + 5.383 × Mo (%), using a Cu-to-Mo value ratio of 1:5.383 thatincorporates metal prices and metallurgical recoveries. The November 2025 Mineral Resource Estimate used a Cu-to-Movalue ratio of 1:5.278.
- Tonnage, grade and contained metal figures are rounded and reported totals may not reconcile exactly due torounding.

MOCOA
QA / QC AND TECHNICAL NOTES

COPPER GIANT®

NOTES ON DRILL RESULTS

Copper equivalent (CuEq) for drill hole interceptions is calculated as: CuEq (%) = Cu (%) + 5.278 × Mo (%), utilizing metal prices of Cu - US$4.00/lb and Mo - US$20.00/lb and metal recoveries of 90% Cu and 95% Mo. Mineralized zones at Mocoa are bulk porphyry-style zones and drilled widths are interpreted to be very close to true widths.

QUALIFIED PERSON (QP)

Edwin Naranjo Sierra, Vice-President of Exploration for CopperGiant, is the designated Qualified Person within the meaning ofNI 43-101 and has reviewed and approved the technicalinformation in this presentation. Mr. Naranjo holds an MSc. inEarth Sciences and is a Fellow of the Australasian Institute ofMining and Metallurgy (FAusIMM). Mr. Naranjo is not independentof the Company. The Mineral Resource Estimate was prepared byAPEX Geoscience Ltd., which is independent of the Company.Warren Black, M.Sc., P.Geo., of APEX, is the independentQualified Person responsible for the Mineral Resource Estimate(effective September 24, 2026).

NOTES ON QA/QC PROCEDURES

Copper Giant operates according to a rigorous Quality Assuranceand Quality Control (QA/QC) protocol consistent with industrybest practices. Core diameter is a mix of HQ and NQ dependingon the depth of the drill hole. Diamond drill core boxes werephotographed, sawed, sampled and tagged in maximum 2-metreintervals, stopping in geological boundaries. Samples werebagged, tagged and packaged for shipment by truck from CopperGiant's core logging facilities in Mocoa, Colombia to theActLabs certified sample preparation facility in Medellin,Colombia. ActLabs is an accredited laboratory independent ofthe Company. Samples are processed in the Medellin facilitieswhere they are analyzed for copper, gold, silver, molybdenum,zinc and lead by 4-Acid digest Atomic Absorption (AA) analysis.Where the copper result exceeded the upper detection limit ofthat method, the copper grade reported is the over-limit assayby the 8-TD-AA method. The sample pulps are air freighted fromMedellin to the ActLabs certified laboratory in Ancaster,Canada where they are analyzed for a suite of 60 elements usingICPOES/ICPMS Total Digestion method. In order to monitor theongoing quality of assay data and the database, Copper Gianthas implemented QA/QC protocols which include standard samplingmethodologies, the insertion of certified copper and molybdenumstandard materials, blanks, and duplicates (field, preparationand analysis) randomly inserted into the sampling sequence.QA/QC program also includes ongoing monitoring of data entry,QA/QC reporting and data validation. No material QA/QC issues have been identified with respect to sample collection, security and assaying.

THE STANDOUTS

TOP FIVE INTERCEPTS — AND THE RECORDS BEHIND THEM

COPPER GIANT®

TOP FIVE INTERCEPTS

Headline intercept of each hole, ranked by Grade × Length

			Grade × Length (%·M)
1	MD-043	1,222 m @ 0.68 % CuEq* 0.43 % Cu · 0.047 % Mo from 6 m	832
2	MD-047	864 m @ 0.72 % CuEq* 0.45 % Cu · 0.051 % Mo from 140 m	621
3	MD-045	1,160 m @ 0.50 % CuEq* 0.31 % Cu · 0.035 % Mo from 6 m	579
4	MD-044	1,050 m @ 0.55 % CuEq* 0.30 % Cu · 0.047 % Mo from 40 m	577
5	MD-074	724 m @ 0.78 % CuEq* 0.51 % Cu · 0.050 % Mo from 179 m	562

All five carry more than a kilometre of continuous mineralization

9.36 Blbs Cu (Inf.) and 2.13 Blbs Cu (Ind.)

Total contained copper up ~50% in the 2026 MRE update

THE RECORD BOARD

The best single samples, and the programme's extremes

HIGHEST SINGLE SAMPLES — NO LENGTH RESTRICTION

COPPER	MOLYBDENUM	CuEq*
5.08 %	0.74 %	6.31 %
MD-058, 599.4 m	MD-043, 269.8 m	MD-043, same sample

LONGEST DRILL HOLE
1,235 m
MD-043

BEST 250 METRES
1.35 % CuEq
MD-043 · 0.74% Cu, 0.114% Mo

LONGEST ABOVE 0.70 % CuEq*
1,177 m
MD-043, averaging 0.70% CuEq

HIGHEST COPPER INTERVAL
1.38 % Cu
MD-074, over 50 m

DEEPEST POINT REACHED
622 m
Above sea level · MD-063

GREATEST VERTICAL DEPTH
1,051 m
MD-049, collar to end of hole

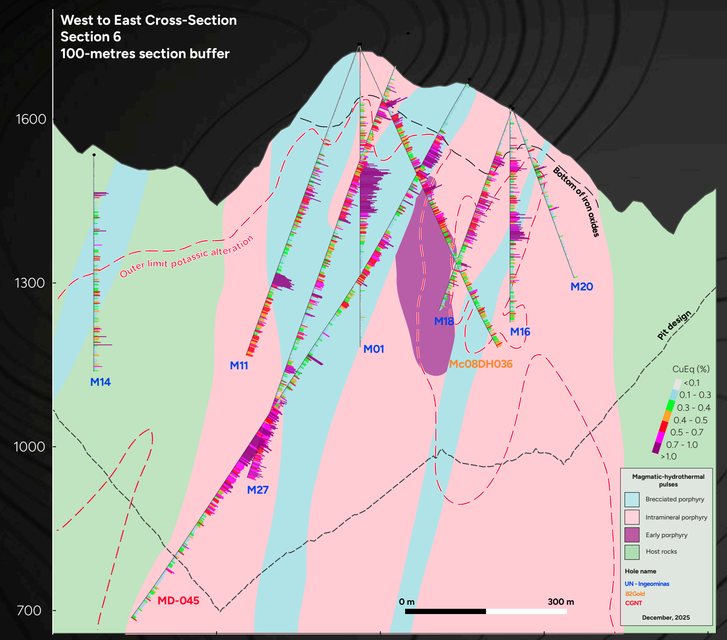

WHERE MOCOA´S METRES CAME FROM

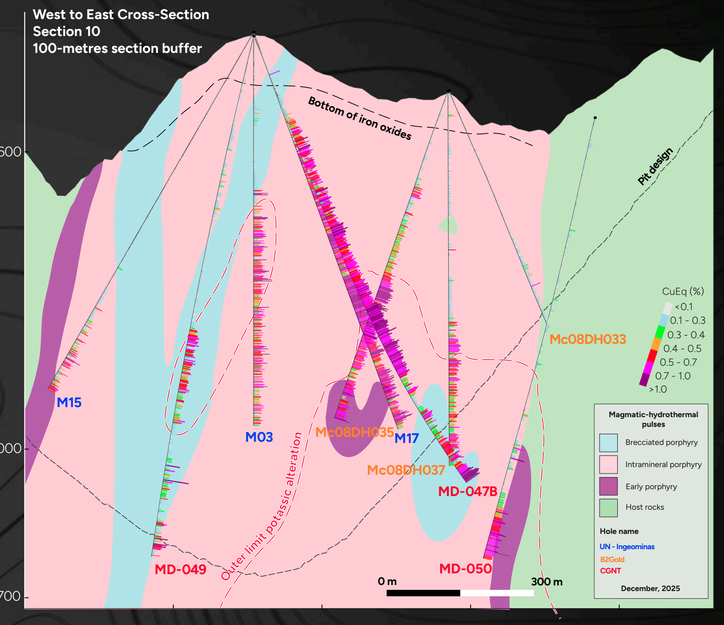

18,308 m	6,891 m	30,200 m
1978 - 1983 UN-INGEOMINAS	2008 - 2012 B2Gold	2022 - September 2026 Copper Giant

CuEq* (%) = Cu (%) + 5.383 × Mo (%), at US$4.75/lb Cu and US$25.00/lb Mo with metallurgical recoveries of 88% Cu and 90% Mo — the economic assumptions of the Mineral Resource Estimate announced 14 October 2026; copper equivalent values are calculated by the Company from the reported grades. Intercepts in news releases issued before 14 October 2026 use a ratio of 1:5.278 and are not directly comparable. Each headline intercept is the best contiguous interval in that hole at a 0.15% CuEq* cut-off; daughter holes are counted from their own kick-off. Grade × length is the reported grade multiplied by the reported interval length, in percent-metres as a comparative measure of intercept quality only, not a resource or metal-content estimate. Single-sample records are the highest individual assays in the Company's database from the 2022–2026 drill programmes, over sample lengths; individual high-grade samples are selective in nature and are not necessarily representative of the mineralization on the property. See the QA/QC and Technical Notes slide.

ARQUITECTURE OF A GIANT

THE SHAPE OF A PORPHYRY

PARAGENESIS — WHERE THE METAL ACTUALLY ARRIVES

Schematic vein sequence and phase assignment, after Mocoa core logging

182 Ma → 172 Ma

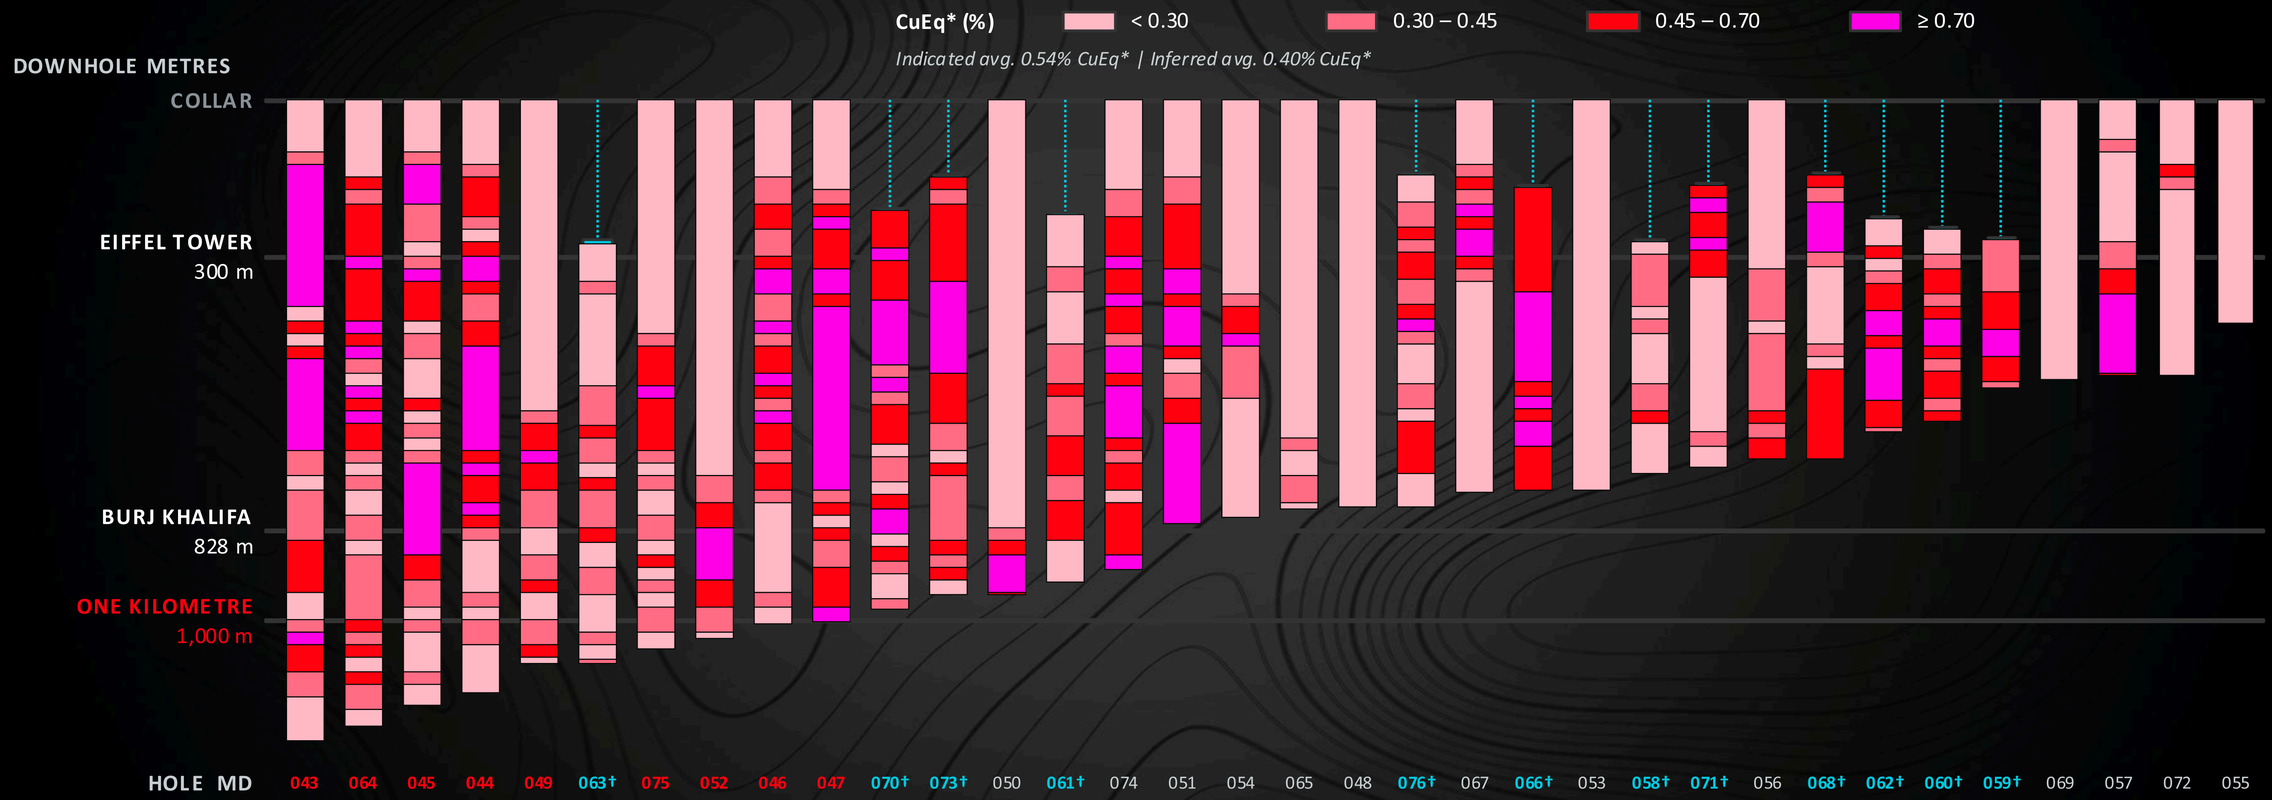

EDM	A	AK	B / BQM	QM	C	D
early dark micaceous	quartz	quartz + K-feldspar	molybdenite + quartz	quartz – molybdenite	chalcopyrite ± pyrite	pyrite ± cpy · QSP
			Mo PEAK		Cu PEAK	
Early stage		Early (1) — Intramineral		I1 — intermineral porphyry + hydrothermal breccia		L1 — late-mineral

Sections constructed in Leapfrog from the Company's drillholedatabase with a 100 m section buffer; downhole bars arecoloured by CuEq (%) on the scale used for the Mineral ResourceEstimate. CuEq (%) = Cu (%) + 5.383 × Mo (%), at US$4.75/lb Cuand US$25.00/lb Mo with recoveries of 88% Cu and 90% Mo.

A KILOMETRE OF COPPER

DRILL HIGHLIGHTS

COPPER GIANT®

† **daughter hole** — kicks off inside a parent hole at the tick and deepens on its own directional design. Not a short hole.

CuEq* (%) = Cu (%) + 5.383 × Mo (%), at US$4.75/lb Cu and US$25.00/lb Mo with metallurgical recoveries of 88% Cu and 90% Mo — the economic assumptions of the Mineral Resource Estimate announced 14 October 2026; copper equivalent values are calculated by the Company from the reported grades. Intercepts reported in news releases issued before 14 October 2026 use a ratio of 1:5.278 and are not directly comparable. Each bar runs from the first to the last assayed sample in the hole, drawn to true downhole depth; daughter holes start at their own kick-off. Colour blocks are 25-metre composites of the Company's assay database, merged where adjacent composites fall in the same grade band. Mineralized zones at Mocoa are bulk porphyry-style and drilled widths are interpreted to be very close to true widths. See the QA/QC and Technical Notes slide for sampling and analytical procedures.

9 **HOLES OVER A KILOMETRE**

Nine of the thirty-four holes with reported results carry more than a kilometre of assayed interval
